For Payment Year 2018, we will apply the blended risk score -- 15% of the risk score calculated with diagnoses from encounter data and FFS claims summed with 85% of the risk score calculated with diagnoses from RAPS and FFS claims – for the mid-year PY 2018 risk scores, as well as when we calculate the final PY 2018 risk scores.

For Payment Year 2019, we will apply the blended risk score – 25% of the risk score calculated with diagnoses from encounter data, FFS claims, and RAPS inpatient records summed with 75% of the risk score calculated with diagnoses from RAPS and FFS -- when we calculate the initial PY 2019 risk scores, and will continue to do so for mid-year and final risk scores.
