

MANAGED SOC

GreyCastle Security's Security Operations Center (Managed SOC) provides end-to-end cybersecurity protection by filling gaps in your available time, budget, and talent. Managed SOC delivers end-to-end security solutions, including cloud-based technology, a dedicated operations center to identify and mitigate attacks on your behalf, and proactive toolsets that reduce risks and minimize the impact of future attacks. With our Managed SOC, GreyCastle Security provides 24/7 automated escalation and incident response with digital forensics expertise to reduce the time to mitigate and recover from incidents.

What's Included

Modern Solutions Built on Market Leading Tools & Frameworks

Flexible deployment and pricing allow for turnkey solutions that free you from the limitations of a one-size-fits-all model. Find root causes, understand risky behaviors, monitor compliance, and more.

Better Protection & Visibility

Our Managed SOC analysts deliver proactive, 24/7/365 coverage so you can focus your attention on driving your business while we worry about cybersecurity.

Automated Escalation Solutions

From detection to response, our automated solutions reduce mitigation times and minimize the impact of incidents. If an event escalates to an incident, the Incident Response team is deployed immediately.

AT A GLANCE

- Gain 24/7 threat detection and incident response via a remote operations center
- Reduce the time to detect and respond to cyber threats
- Uncover the root causes of incidents, validate remediation, and grow your cybersecurity program
- Readily meet program compliance objectives concerning digital risk

Why GreyCastle Security for Managed SOC?

- We do the heavy lifting: Incident response, log analysis, prioritization, remediation, and more
- A fully guided program led by experienced cybersecurity professionals
- A true risk-based approach that maximizes ROI where we do all the heavy lifting
